

Visual Pak Entity Relationship Diagram (ERD)

Entity Relationship Diagram (ERD) :

ERD is also known as the Entity-Relationship Model. Entity means any object used to store information and are distinguishable, relationship means connection, and diagram/model means a picture uses to represent something. So, ERD is simply the diagram or model that is used to represent or show the relationship between the entities or data objects that are stored in a database. The main components of this E-R model are 'Views' and the join types. Items without a join are cross joined.
